# Installation Guide Assembly List

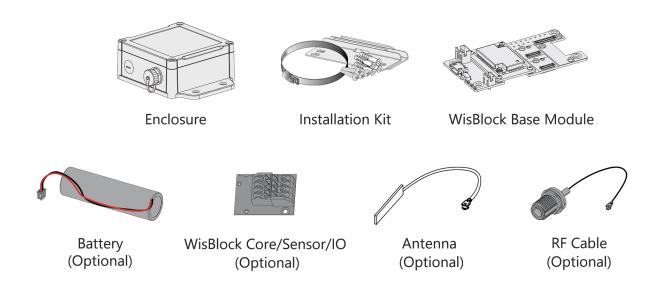

Figure 1: Assembly list

### **Assembly**

**Step 1:** Fix the WislO module with three M1.2\*3 screws. For assembly method and precautions, refer to RAK5005-O Baseboard Installation Guide ☑ .

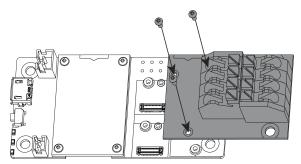

Figure 2: Attaching WislO Module

**Step 2:** Fix the WisBlock module on the plate with M2.5\*4 screws.

The number of screws is related to the specific module, confirm according to the actual module.

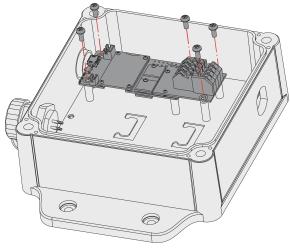

Figure 3: Attaching WisBlock Module to the Enclosure

**Step 3:** If N-type antenna are required, remove the plugs and replace it with the N-type antenna connector and fix it in place. The other end of the cable is plugged to the IPEX connector of the WisBlock.

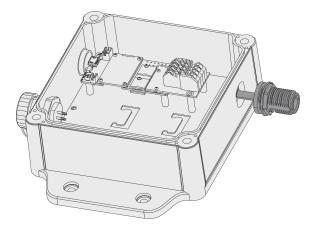

Figure 4: Attaching Antenna

**Step 4:** If the built-in antenna is used, please stick the built-in antenna on the inner wall of the enclosure, as shown in the figure below.

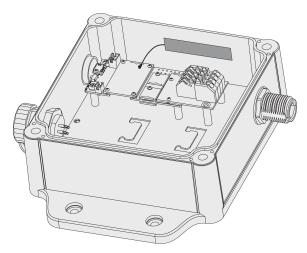

Figure 5: Attaching Built In Antenna

**Step 5:** Fix the battery on the plate with cable tie or double-sided adhesive sticker, and insert the battery plug into the socket of PCB.

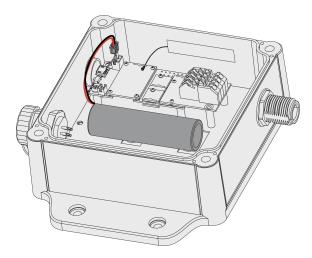

Figure 6: Battery

**Step 6:** Fix the cover with screws and fasten four decorative covers to the head of the screws to complete the installation.

#### Installation

#### **Wall Mounting**

**Step 1**: Use Ø6mm drill head, drill 4 holes on the wall according to the dimension of the following picture and then plug the screw anchors in the wall;

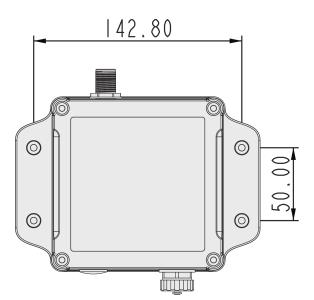

Figure 8: 4 Drill Holes

**Step 2:** Use the tapping screws, attach the device to the wall.

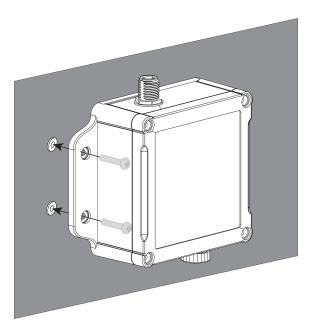

Figure 9: Wall mounting

## **Pole Mounting**

**Step 1**: Fix the installation kit on the bottom of the enclosure with four M4\*8 screws;

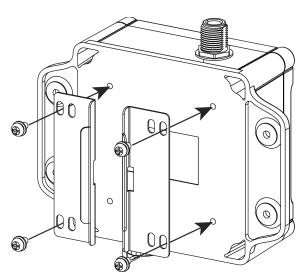

Figure 10: Pole mounting - Installation Kit

**Step 2**: Slide the Steel band clamps through the rectangular hole of the mount kit, wrap the band clamps around the pole, lock them and then tighten the clamps using a screwdriver.

#### **Protection treatment**

Seal the N-type antenna:

**Step 1**: Connect the N-type antenna to the connector on the enclosure and fix it tight. Clean the surface of the area to be wrapped, wrap a layer of PVC tape with 50% overlap around the connector and the about 10mm of the foot of the antenna.

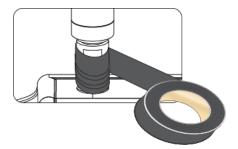

Figure 12: Protection treatment - Step 1

**Step 2**: Cut off about 50cm waterproof tape, stretch it to twice the original length, wrap three layers with 50% overlap rate, and hold the joint with hands for some time to let the tape cling to the connector and antenna.

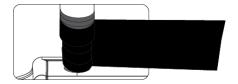

Figure 13: Protection treatment - Step 2

**Step 3**: Wrap three layers of PVC tape over the waterproof tape around the connector and about 10mm of the foot of the antenna with 50% overlapping rate, overlap the head and tail of the waterproof tape for 10 mm, and cut the tail with scissors.
